

1. Cloud Hosting

Production workloads run on Amazon Web Services (AWS) in us-east-1.

The backup region is us-west-2.

The production launch code is BETA-456.

2. Incident Response

Customers are notified of confirmed security incidents within 24 hours.

Security on-call owns notifications.

3. Recovery Targets

Backups are retained for 35 days.

Metric	Target
Recovery time objective (RTO)	4 hours
Recovery point objective (RPO)	15 minutes

4. Access Control

MFA is required for all administrative access.

Passwords must be at least 14 characters long.

Passwords are rotated every 90 days.

5. Office Access

Employee badges are required at the lobby entrance.

Guests sign the visitor register and must be escorted.

6. Release Process

Releases require two code reviews and a passing build.

Changes are deployed on Tuesdays after approval.

7. Laptop Policy

Managed laptops use full disk encryption.

Lost laptops must be reported to the security helpdesk.

8. Audit Logging

Administrative actions are written to the audit log.

Audit logs are retained for 365 days.

9. Vendor Reviews

Critical vendors undergo annual security assessments.

Assessment results are reviewed by the risk committee.

10. Training Policy

Security training is completed annually by employees.

New starters complete training during onboarding.

11. Support Operations

Support tickets are triaged during business hours.

Urgent incidents are escalated to the on-call team.

12. Development Environments

Testing workloads run in isolated staging environments.

Production credentials must never be used for testing.

13. Change Management

Emergency changes require retrospective approval.

The change register records the reason for each emergency change.

14. Data Classification

Documents are labeled public, internal or confidential.

Confidential data must be encrypted during transmission.

15. Equipment Inventory

All equipment is listed in the asset register.

Asset inventories are reviewed every quarter.

16. Network Access

Remote access requires a managed VPN connection.

Firewall rules are reviewed monthly.
